

Avneesh Jadhav

AI Engineer and Full-Stack Developer

Email: avneeshjadhav1@gmail.com

Phone: +91 9545457385

Location: Pune, Maharashtra, India

LinkedIn: [linkedin.com/in/avneeshjadhav/](https://www.linkedin.com/in/avneeshjadhav/)

SUMMARY

An AI Engineer and Full-Stack Developer building AI-native applications, automation systems, and scalable software products. Worked across Machine Learning, Generative AI, backend systems, and modern web stacks to turn complex ideas into practical, production-oriented solutions.

EDUCATION

Bachelor of Engineering - Computer Engineering (2022- 2026)

University of Pune

SKILLS

- **Programming Languages:** Python, JavaScript, TypeScript, Rust, C++, Java
- **AI/ML:** Machine Learning, Deep Learning, Artificial Intelligence, Generative AI, Natural Language Processing, LLMs, LangChain, LangGraph, Agentic AI, Retrieval-Augmented Generation, Vector Databases, Prompt Engineering
- **Infrastructure and Systems:** Linux, Git, DevOps, CI/CD, Cloud Computing, Deployments, APIs, Docker
- **Core:** Data Structures, Algorithms, Workflow Automation

PROJECTS

- **Agentic RAG System:** Developed a RAG pipeline with agentic workflow orchestration using Python, LangChain, LangGraph, and ChromaDB. Evaluated it using DeepEval framework with average scores: 83.3% Answer Relevancy, 97.7% faithfulness, 100% context precision, 81% context recall, and 83% overall pass rate (*Jul, 2026*) [link](#)
- **LLM from Scratch:** Built a 124 million parameter LLM transformer from scratch in PyTorch; trained it on 2 billion tokens; achieved 14.8 validation perplexity and deployed it for inference via a serverless instance (*May, 2026*) [link](#)
- **Project Vulcan:** Created a self-hostable AI platform with terminal integration, MCP tools, and browser control to automate daily workflows. Built using TypeScript, React, Rust, Axum, SQLite, and Docker (*Apr, 2026*) [link](#)
- **Autonomous Outreach System:** Developed a system to source new leads, enrich them, generate personalized messages, and send outreach emails, all on autopilot using n8n. As a result, sourced 84,000+ leads and had ~ 38 percent open rate for the enriched leads (*Mar, 2026*) [link](#)

CERTIFICATIONS

- Machine Learning Specialization - Stanford University
- Fundamentals of Deep Learning - Nvidia
- Advanced Linux: The Linux Kernel - LinkedIn Learning
- Oracle Cloud Infrastructure Generative AI Professional - Oracle
- Oracle AI Vector Search Professional - Oracle
- Model Context Protocol: Advanced Topics - Anthropic
- Advanced Rust: Managing Projects - LinkedIn Learning
- AMCAT Certified Software Engineer - AMCAT

EXPERIENCE

Technical Team Member, Association of Computer Engineering Students (ACES), PVGCOET

- Conducted a Python workshop to help students improve programming and engineering skills
- Mentored juniors in programming fundamentals and core concepts
- Carried out planning and execution of technical events and student activities

ACHIEVEMENTS

- Research paper selected for the 11th ICTIS International Conference in Bangkok, Thailand
- Received golden badges on HackerRank for Python, C++, Java, and Problem Solving skills
- Successfully solved 270+ core DSA problems on LeetCode
