ABOUT ME

AI Engineer and Full-Stack Developer focused on building AI-native applications, automation systems, and scalable software products. I work across machine learning, backend systems, and modern web stacks to turn complex ideas into practical, production-oriented solutions.

EDUCATION

BE - Computer Engineering, University of Pune
2022- 2026 (Ongoing)

SKILLS

- Languages: Python, JavaScript, Rust, C++, Java
- AI/ML: Machine Learning, Deep Learning, NLP, LLMs, Transformer Models, Agentic AI
- Systems: Linux, APIs, Workflow Automation, DevOps, CI/CD, Cloud Computing
- Core: Data Structures, Algorithms
- Tools: OpenCode, Antigravity, n8n

ACHIEVEMENTS

- Research paper selected for the 11th ICTIS International Conference in Bangkok, Thailand
- Received multiple golden badges on HackerRank for Python, C++, Java, and Problem Solving skills
- Successfully solved 270+ core DSA problems on LeetCode

CERTIFICATIONS

- Machine Learning Specialization - Stanford University
- Fundamentals of Deep Learning - Nvidia
- Advanced Linux: The Linux Kernel
- Oracle Cloud Infrastructure Generative AI Professional
- Introduction to Model Context Protocol - Anthropic
- Oracle AI Vector Search Professional
- Model Context Protocol: Advanced Topics
- Advanced Rust: Managing Projects
- AMCAT Certified Software Engineer - IT Services
- Supervised Machine Learning: Regression and Classification
- Advanced Learning Algorithms
- Unsupervised Learning, Recommenders, Reinforcement Learning

PROJECTS

- Built a 124M-parameter LLM transformer from scratch in PyTorch; trained it on 2B tokens; achieved 14.8 validation perplexity and exposed it for inference via a serverless API. (2026)
- Created Project Vulcan, a self-hosted AI assistant platform with terminal-level workflow support using TypeScript, React, Rust, Axum, and SQLite. (2026)
- Developed Kovero AI, a user-centric healthcare claims assistance platform using Next.js, React, TypeScript, Rust, Axum, SQLite, and Docker; added OCR and transformer-based LLM workflows for document verification and query resolution. (2026)
- Autonomous Lead Generation/Client Outreach System. (2026)
- Voice AI system for fully automated inbound call handling. (2025)

EXPERIENCE

Technical Team Member, Association of Computer Engineering Students

Key Responsibilities:

- Conducted technical workshops to help students improve programming and engineering skills.
- Mentored juniors in programming fundamentals.
- Supported planning and execution of technical events and student activities.
